

TABOT JOEL EBANGHA

Data Analyst | Data Science | Power BI | Python

Buea, Cameroon | +237 671 967 286 | joeltabot56@gmail.com

PROFESSIONAL SUMMARY

Data analyst and rising data scientist with a Computer Engineering foundation, building toward an MSc in Data Science. Turns raw, messy data into decisions using Power BI, Python, and SQL — from KPI dashboards to time-series simulations. Full-stack development background gives an edge most analysts don't have: the ability to speak fluently across data, product, and engineering teams.

PROJECTS

Gym Performance Analytics Dashboard *(Power BI, Python — Pandas, NumPy)*

- Engineered a 2+ year synthetic time-series dataset (900+ daily records) modeling strength progression across bench press, squat, and deadlift alongside bodyweight change.
- Built an interactive Power BI dashboard with DAX measures tracking strength growth, personal records, and training adherence (5x/week consistency).
- Used Python (Pandas, NumPy) to simulate and transform the dataset, then modeled a 50kg → 70kg bodyweight transformation to surface trend and correlation insights.

Sales Performance Dashboard *(Power BI)*

- Designed a multi-page Power BI dashboard analyzing sales trends across region, category, and time period for a simulated retail dataset.
- Built core KPIs — total sales volume, regional performance, monthly trend — using DAX measures and dynamic slicers.
- Applied data storytelling principles (visual hierarchy, drill-down, clean layout) to surface business insights at a glance.

House Marketing Analysis *(Python, Data Analytics)*

- Analyzed a housing dataset in Python to identify the factors driving property pricing and market trends.
- Cleaned and transformed the data with Pandas, resolving missing values and inconsistent formatting ahead of analysis.
- Explored relationships between location, property features, and price to surface pricing patterns.
- Turned findings into insights supporting data-driven real estate marketing decisions.

EXPERIENCE

Technical Intern — Promedia SARL

- Executed hardware and software integration work that improved overall system reliability.
- Applied Matrix Comsec protocols to strengthen security system infrastructure.
- Reduced system downtime through structured troubleshooting and performance optimization.

Web Developer — Swiftech

- Built responsive web applications using React and Laravel.
- Optimized MySQL queries, improving data processing efficiency.
- Implemented Git-based workflows to support team collaboration.

EDUCATION

MSc Data Science (Ongoing) — University of Buea

BEng Computer Engineering — University of Buea

TECHNICAL SKILLS

Data & Analytics: Power BI (DAX, data modeling), Python (Pandas, NumPy), SQL, Data Visualization

Development: JavaScript, React, PHP, Laravel, HTML, CSS

Tools: Git, MySQL, Pendo Analytics

Concepts: Data Analysis, Time Series, Data Modeling, Dashboard Design

CERTIFICATIONS

- IBM Enterprise Design Thinking
- Pendo Product Analytics
- Matrix IPVS Certification
